Hello[1].

See you[2].

> On Unix-like shells (like bash, for which your script is written)
> glob expansion (e.g. turning *.md into file1.md file2.md file3.md)
> is performed by the shell, not the application you're running.
> Your application sees the final list of files, not the wildcard.

> multiple-markdown-files-using-pandoc-on-windows

---

[1] Guten morgen.
[2] Adios!
